

Department of General Surgery

Alcalá de Henares, December 2nd, 2014

TO WHOM IT MAY CONCERN

First of all let me introduce myself.. My name is Javier Granell, and I am the Chief of the Department of General Surgery at Hospital Príncipe de Asturias, Madrid. Spain.

My main field of interest nowadays is abdominal wall reconstruction. Working in a department of General Surgery, where both scheduled as emergency surgery are done daily, I have to face all the pathologies of the abdomen, including wall ones.

In collaboration with my team, we had the possibility to implant around 200 double layer meshes in two and a half years (80% umbilical ones, 15% 2PCMC and 5% FLAP) and my final comments on them are absolutely positive.

I have mainly appreciated of this mesh, besides its chemical as biological (first of all it is a light weight mesh) characteristics, is the easiness possibility to implant it with a laparoscopic or open approach.

I have the possibility to follow up all my cases and up to now I have not recurrences but above all no morbidities early and late and no pain.

I am going to continue using this mesh in the future.

Best regards,

J. Granell
Chief of Department of General Surgery
